Welcome To S1000D

Welcome to S1000D, the International Specification for Technical Publications utilizing a Common Source Database. Since its inception over 20 years ago, S1000D has grown to where it is now used widely around the world, for defense, land, sea and air applications, in civil aviation, and even implemented in industries like construction in Scandinavia. The specification is publicly available and is free for downloading from this website. Downloads include the specification, schemas, samples and a data dictionary.

Announcing the NEW S1000D website

The S1000D Steering Committee presents this new website as an enhanced aid to understanding S1000D. It has been constructed to offer users/readers of the specification information that will provide guidance on the specification and the reasons for its use. It will contain various resources to aid this guidance, including: its history, a high level overview, the benefits of adoption, how to deal with legacy data and information on various aspects of the specification.

As it is meant to aid usage/adoptions of the specification we are hoping that you will provide us feedback to help us focus on issues that affect this usage/adoptions. All ideas are welcome. Please visit our Contact Us page to provide your comments.

We hope that you like the new look and will provide feedback, thanks for accessing the site.

Announcements (show all)
- Issue 4.0.1 Default BREX data module
- Issue 4.0.1 release
