# Benefit Overview

## Background

- Programmatic factors drove the move to S1000D.
  - Rapidly changing and compressed development schedules to meet a Submarine Modernization strategy
  - Desire to continue improving IETM and training products
  - Projected fiscal constraints on program budget
- Develop all data in S1000D format to maintain the “make once, use many times” program premise.
- Commonality in Business Rules, Non-proprietary Development Tools, CSDB, Viewer.

## Present

- Two years into delivering S1000D IETMs to the Submarine Force has shown a reduction in development time; reduced overall program cost
